

Music

We will be listening to lots of different pieces of music and learning to identify rhythm and pulse. We will be exploring ways to make music without instruments, for example, by using our body and voices. We will be learning to sing songs in rounds and discussing how pieces of music make us feel. We will be changing lyrics of songs we know.

D&T

We will be designing and making our own drums and exploring how we can change the pitch of the sound. We will be making guitars using boxes and rubber bands and exploring how the thickness of the bands changes the sound.

Geography

We will be using different human and physical items in our local area to make music. We will be making maps and plans of where we made the best sounds.

Beat Band Boogie! Autumn Term 2 Year 2

Wow day—We will take part in an African drumming workshop on Tuesday 31 October

Science

We will investigate how the amount of water in a jar affects the sound that it makes. We will investigate our sense of hearing and gather data about the different sounds we can hear around our school. We will be investigating what affects how we hear sound from a distance

Art

We will be creating art using rhythm, for example, by stomping across large paper or by clapping our hands in time to make a pattern.

R.E

Why did God Give Jesus to the world?

We will be exploring the Christmas story.

Computing

We will be using audio software to record our voices as we recite songs and rhymes.
